EXPERIENCE

Solytics Partners, Berlin & Mumbai

Technical AI Product Manager – Nimbus Platform Modernization Mar 2025 – Apr 2026

- Spearheaded modernization of the Nimbus fintech platform by replacing static rule-based modules with in-house LLM-powered deterministic and agent-assisted capabilities, reducing manual compliance review effort by 45%.
- Built internal agentic validation layers (document extraction + confidence scoring + structured output checks), improving extraction accuracy and reducing rework cycles across AML/KYC workflows.
- Fine-tuned models for core banking workflows (KYC, credit reports, regulatory filings), increasing case precision and lowering false positives in compliance flags.
- Introduced OCR + LLM hybrid pipeline automating large-volume document review, enabling faster enterprise onboarding; built agentic orchestration layer increasing UDF adoption by 65%.
- Standardized third-party AML/KYC API integrations, reducing turnaround time by 25%; led architecture discussions and AI demos directly supporting a €15M enterprise sales pipeline.

Ogilvy, Mumbai

AI Product Manager

Aug 2024 – Mar 2025

- Led "Sing it with Milka" AI-native campaign generating 54M+ unique AI music creations, resulting in 9% global revenue uplift for the brand.
- Authored user stories, acceptance criteria, and product documentation supporting global product releases across multiple iterative delivery cycles.
- Partnered with Engineering and UX teams to design scalable analytics dashboards and reporting workflows; reduced manual reporting effort by 35% through automation.
- Led discovery sessions with business stakeholders to define analytics platform requirements; supported Sales teams with product demonstrations and technical clarifications.

Schbang, Mumbai

Technical Product Manager

Oct 2022 – Aug 2024

- Owned and rebuilt AI-driven document workflows handling 50K+ KYC/AML documents monthly, achieving 70% reduction in manual operations.
- Designed conversational AI prototypes for BFSI clients; structured prompt pipelines and validation logic reduced hallucination rates and improved response reliability.
- Implemented BPMN-aligned orchestration using n8n + Azure OCR + LLM pipelines, shortening processing cycles and improving operational transparency.
- Applied AI-driven personalization to digital banking journeys: +18% conversion uplift, 12% churn reduction; shifted apps (5M+ users) to weekly deployments, cutting time-to-market by 34% faster time-to-market.

SEB Global Services, Riga

Derivative Operations Specialist

Jun 2019 – Oct 2021

- Automated 150+ reporting processes using structured Excel-based models, saving 40+ hours/month in operational workload.
- Optimized settlement workflows in compliance-heavy derivative environments, reducing error rates and improving processing time.

CORE COMPETENCIES

AI Product Strategy & Roadmapping

Led full-cycle LLM platform modernization for fintech enterprises; translated complex AI capabilities into measurable outcomes: €15M+ sales pipeline, 45% efficiency gains, 65% adoption uplift across product lines.

LLM & Agentic Systems Architecture

Hands-on design of multi-agent orchestration layers, OCR + LLM hybrid pipelines, confidence scoring, and human-in-the-loop validation for production AI deployments in regulated banking environments.

Fintech & Compliance Domain Expertise

Deep background in KYC/AML workflows, GRC frameworks, US Mortgage, credit reporting, and regulatory filing systems; built compliance-aware AI tools adopted by enterprise banking clients.

Data-Driven Product Ownership

Consistent measurable delivery: 70% reduction in manual ops, 54M+ AI interactions, 34% faster time-to-market for digital banking apps (5M+ users). Backlog ownership across full Agile delivery cycle.

AI Evaluation & Reliability

Built golden-dataset evaluation framework, LLM regression testing pipelines, and model monitoring dashboards ensuring safe, reliable AI deployment across production environments.

Cross-Functional Technical Leadership

Coordinated Engineering, UX, Sales, and Compliance teams across Berlin, Mumbai, and Riga; led architecture reviews and AI demos for C-suite stakeholders in multilingual enterprise settings.

LANGUAGES

English · C2 (Proficient)

Spanish · B1 (Intermediate)

German · A1 (Basic)

CERTIFICATIONS

- Certified Business Process Analyst (CIBM, BPMN)
- Certified Scrum Product Owner (CSPO)
- LangChain for LLM Applications – Coursera
- Vector Databases & RAG Pipelines – LangChain
- MLOps Fundamentals – DeepLearning.AI
- Prompt Engineering for LLMs – Deepplink
- Microsoft Responsible AI (Foundations)
- AWS Cloud Practitioner (Foundational)
- Google Project Management
- Google Data Analytics
- Product Management – Coursera
- Process Engineering & Analytics

AI PROJECTS

AI-native B2C Insurance App

- Spearheaded end-to-end product thinking for an AI-first insurance wallet aligned to BIMA Sugam infrastructure; designed One-Tap Claim Kit and consent-scoped upload links, reducing documentation friction.
- Built explainable policy cards using clause-grounded RAG + citation logic, enabling users to understand exclusions in plain language.
- Architected GROMO AI Agent (chat + voice) capable of executing claims, renewals, and network search tasks with structured confirmation flows.
- Defined measurable KPIs: +60% perceived helpfulness, +25% improvement in complete claim submissions.

LLM Evaluator – Golden Dataset Evaluation Platform

- Built golden-dataset-based evaluation framework to benchmark LLM outputs against trusted reference answers.
- Implemented exact match, cosine similarity, and LLM-as-judge scoring mechanisms, enabling systematic regression detection before model deployment.
- Designed analytics dashboard to monitor model performance drift and confidence calibration over time.

Autonomous Lead Enrichment with Human-in-the-Loop Workflow

- Built n8n-based agentic workflow that enriched, scored, and generated outreach emails using GPT-5; introduced structured human-in-the-loop review via Claude MCP, preventing automated errors before outreach.
- Implemented automated Gmail draft creation and logging, ensuring audit trail and compliance.
- Enabled scalable review (40–80K leads) while maintaining quality controls, resulting in 70% faster lead closures for SMBs.

EDUCATION

Riga Technical University

M.Sc. in Business Informatics Sciences

Riga, Latvia

Riga Technical University

B.Sc. in Engineering Economics & Statistics

May 2022 · Riga, Latvia

TECHNICAL SKILLS

Gen-AI & Agentic Systems

LLM Application Design, Agentic Workflows, Multi-Agent Orchestration, Function Calling, Context Engineering, RAG Pipelines, Memory & Session Management, Prompt Engineering & Versioning, Model Fine-Tuning, AI Guardrails, LLMOps, AI Governance

AI Evaluation & Reliability

Golden Dataset Evaluation, LLM Regression Testing, Hallucination Detection, Confidence Scoring, Model Monitoring, AI Observability, Human-in-the-Loop Validation, Evaluation Framework Design, AI Telemetry, Trace-based Observability

Data, Platforms & Integrations

Python, SQL, ETL/ELT Pipelines, OCR + LLM Document Intelligence, Structured Data Extraction, REST APIs, Webhooks, Event-Driven Architectures, n8n Automation, Camunda BPMN

Cloud & Infrastructure

AWS (EC2, S3), Azure, GCP, CI/CD Pipelines, Environment & Release Management, Production Deployment for AI Systems

Product, Analytics & Experimentation

AI Platform Strategy, Platform Modernization, Enterprise Roadmaps, Technical Product Ownership, Agile & Scrum, Product Metrics, A/B Testing, Experimentation Frameworks, Power BI, Looker, Google Analytics

Financial Systems, Research & Tools

KYC/AML Workflows, GRC, US Mortgage & Credit Systems, Financial Operations Automation, Compliance-Aware AI, User Interviews, Stakeholder Management, Customer Journey Mapping, Figma, Framer, Miro, Jira, Confluence, Notion, Cursor, Claude Code, Model Risk Management
